2024 Pricing

At L&S we do our very best to keep our prices stable each year, by working closely with our suppliers and absorbing costs where possible.

Due to uncertainty of both supply and input costs we reserve the right to increase prices without prior notice. Please check our website for up to date pricing at www.lsengineers.co.uk

L&S Engineers was formed in 1971 by Wyn Lees and Alan Shaw and operated from a small garage rented from the Coal Board. Originally a small engineering firm, making custom fabrications, water pump strainers and starting handles, the business supplied local customers and sub contracted to larger companies based in the West Midlands.

The business outgrew the original premises and relocated to Bridgetown in the mid 70's, where it continued to undertake a variety of fabrication and machinery work for the construction, plant hire, quarrying and engineering industries. Around this time, the company started to supply a small number of engine and small plant spares to its existing customers.

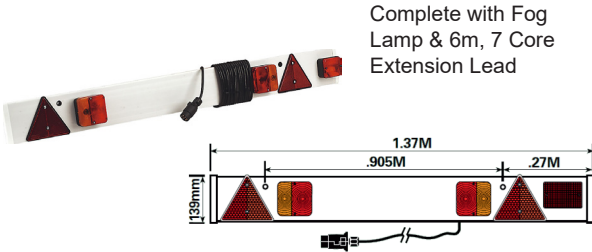

The spares side continued to grow and in the 80's, the business started a van delivery service which supplied spare parts and consumables to businesses all around the UK. The vans would be loaded to the limit and driven all over the country where customers would queue eagerly sometimes filling wheelbarrows with cheap parts from the North!

In 1986 we moved to West Coppice Road in Brownhills, just outside Walsall. The engineering side of the business was sold off in 1992 to concentrate on the growing spares business. Then in December 2015, we moved across the road into a brand new warehouse and office building.

Wheel & Tyre Accessories

Wheel Nut Indicators

CHECKPOINT® is the modern, low cost solution to a long standing operational and management need in the transport industry of implementing and maintaining a low cost, effective procedural system that will allow the checking of wheel nuts for tightness, accurately and economically. The fitting of CHECKPOINT® facilitates these checks within a daily walk round, zero defect reporting procedure.

CHECKPOINT® may be fitted Point to Point, Elephant File, in Echelon or Patterned Configuration to suit the workshop and user.

The size below refers to the 'across the flats' hexagonal dimension of the wheel nut. An accurate means of measuring the wheel nut size is to use a socket

1. Pressure and flow rate of the pressure washer must be known e.g. a flow of 15 l/min - working pressure of 150 bar.
2. In the first line (pressure in bar) go to column '150'.
3. Follow column '150' down to find ltr/min closest to '15' i.e. '15.2'
4. Trace left of '15.2' until nozzle type '055' is reached.
5. The nozzle size required is '055'.
